Getting started

Email Verification · https://verify550.com/documentation/getting-started/

Verify550 is the ultimate tool for validation and verification all in one easy step. Validation (eHygienics technology) removes threats like bots, traps, protestors, litigators, syntax and checks the mx records for inconsistencies, while verification performs smtp handshakes recording the result giving you accurate information on soft or hard bounces.

You can verify emails with our online application or with our real-time API.

Our real-time API is available in PHP, Python, Node.js, and .net.

Follow along below to learn how to use Verify 550 to securely, easily, and efficiently validate and verify your list of email addresses with detailed reports.
