Downloading and exporting results

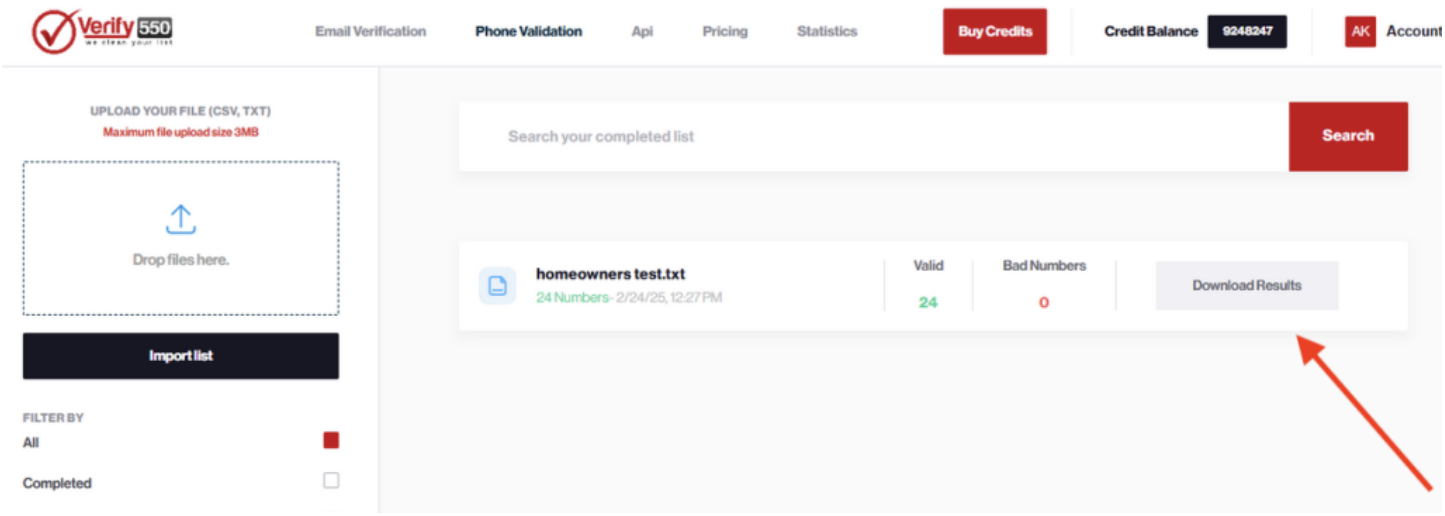

Phone Validation · https://verify550.com/documentation/downloading-and-exporting-results-2-2/

After the validation process, you can download the results in CSV or XLSX formats through a variety of options:

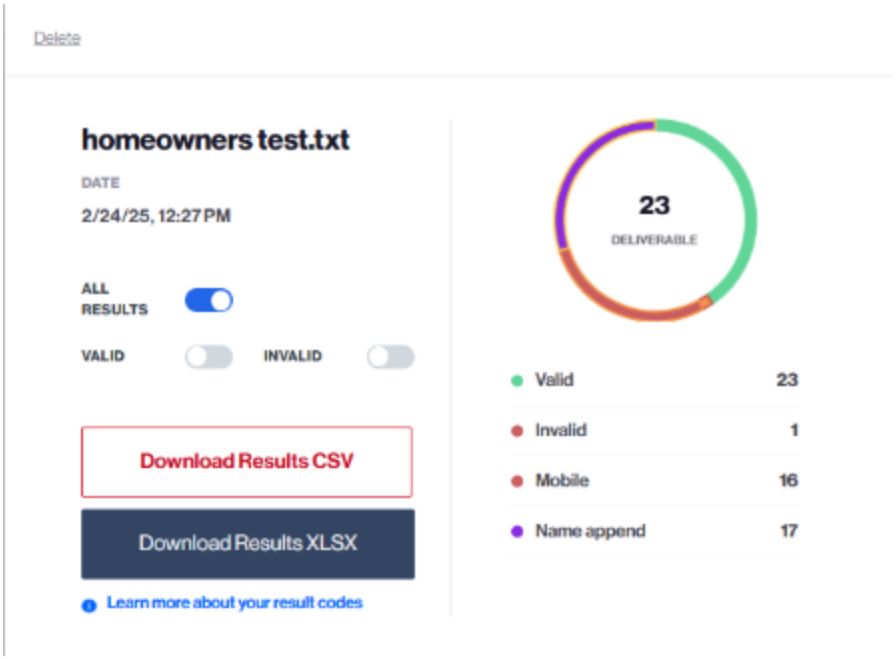

You can download “all results”, or opt to download only the “valid” or “invalid” phone numbers.

As part of our service we identify whether the line is a mobile line and append the person's name to the file if available.

To access your validated results, proceed to the “Phone Validation” section of your dashboard. Select your desired file, then click “Download Results.”

A prompt will appear, allowing you to specify the file category (all results, valid, or invalid) and format preference (XLSX/CSV). You can then download the zipped file.

Once a list has been processed by Verify550, a “result” column is added as the first column of the list to indicate whether the phone number is valid or not.

A result of “ok” means the line is active, while “inactive” means the line is not in use.

We also append the following information to your file if available:

Result_line_type

Result_carrier

Result_location

Result_country_name

Result_country_timezone

Result_country_code

Result_country_utcoffset

Result_country_dstobservedhrs

Result_international_format

Result_local_format

Result_e164_format

Result_can_be_internationally_dialled

Result_validated_at

Result_cnam_name
