Downloading and Exporting Results

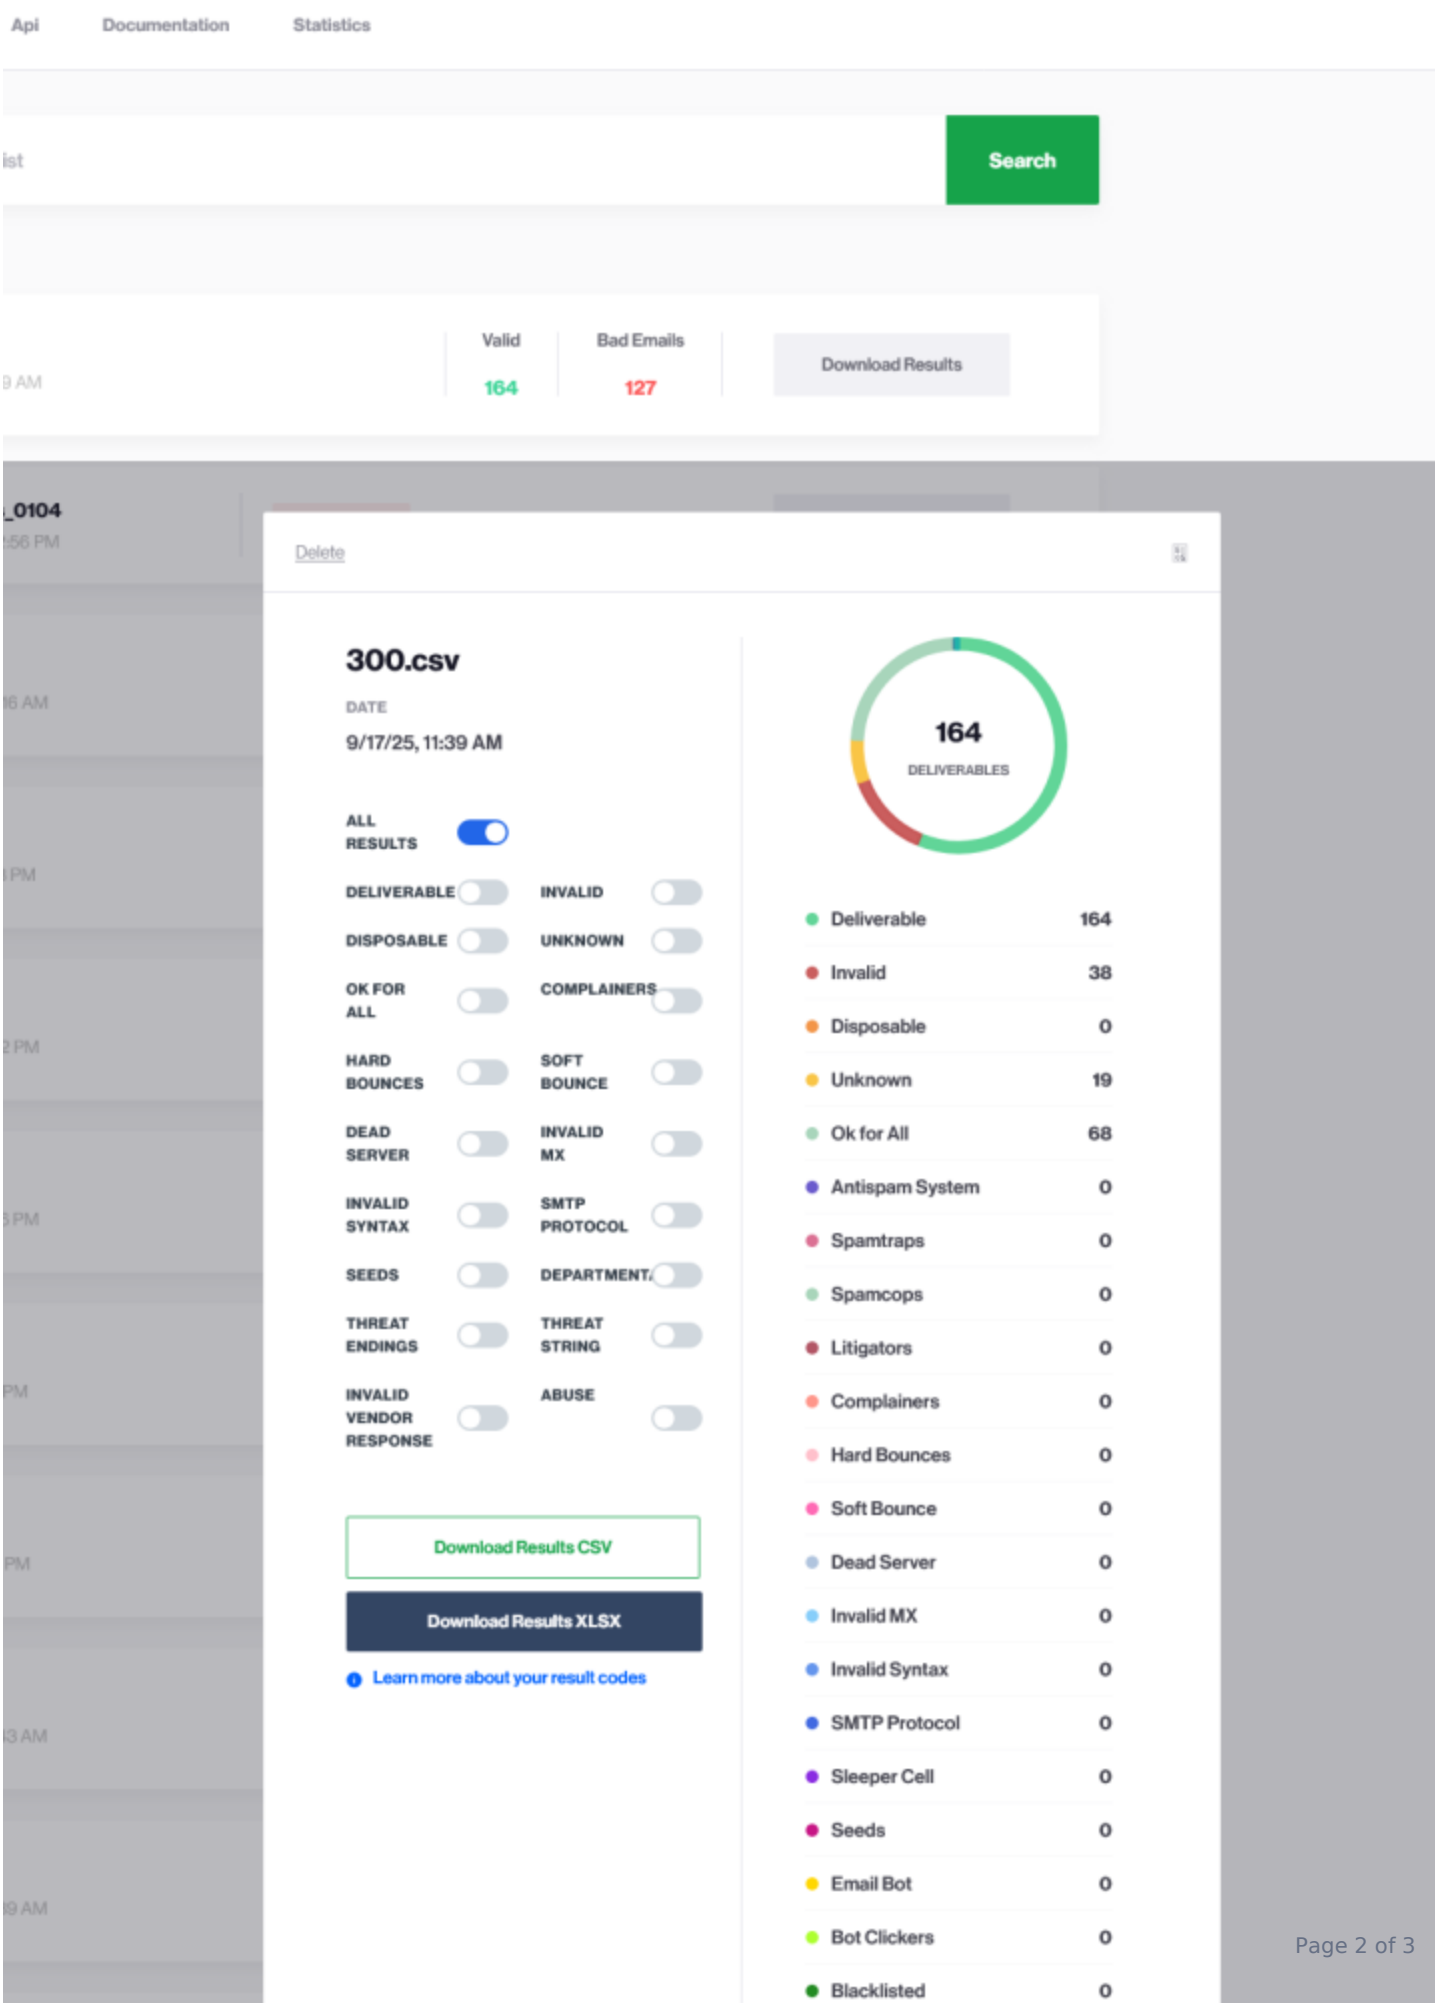

Email Verification · https://verify550.com/documentation/downloading-and-exporting-results-3/

After the verification process, retrieve the results effortlessly in CSV or XLSX formats through a variety of options: opt for a single suppression category, amalgamate multiple suppression categories, isolate deliverables exclusively, or compile all outcomes into a unified file.

To access the verified results, proceed to the ‘Verification’ section within your dashboard. From the ‘Imported Lists’ section, select your desired file, then click ‘Download Results.’ A prompt will appear, allowing you to specify the file category (Deliverable/All Results/Custom Results) and format preference (XLSX/CSV).”

Downloading All Results

You can download your entire list by choosing All Results and then clicking on your desired file type.
