Result Guide

Email Verification · https://verify550.com/documentation/result-guide-2/

Verify 550’s validation first scans to identify disposable, spam-trap, complaint (protestors), botclicker, litigator, spamcop and domain blacklist emails and then runs the email identification process for verification.

After your file has been validated and verified, each email address in the list will be labeled with one of the following statuses:

Color Code	Status	Description
	all_results	Include all results regardless of category (not an email status).
good	deliverable	All is OK. The server is saying that it is ready to receive a letter to this address and no tricks have been detected
caution	ok_for_all	The email server is saying that it forwards this email to a catch all.
caution	accept_all	The server is set to accept all emails at a specific domain. These domains accept any email you send to them.
caution	threat_string	Curse words, code, bot and seed strings inside emails.
caution	threat_domains	Domains of spam fighters and known complainers.
caution	department	Email belonging to a group of people or a role.
caution	sleeper_cell	Emails hosted on a spam fighter server.
caution	threat_endings	Government and University mail exchanges.
caution	seeds	Artificial email addresses which an email marketer owns.
caution	soft_bounce	Temporary delivery failure.

Color Code	Status	Description
do not mail	invalid	The email address is invalid / does not exist or cannot receive mail.
do not mail	disposable	The email is a temporary address to receive letters and expires after certain time period.
do not mail	unknown	The email delivery failed, but no reason was given.
do not mail	dead_server	The email server is dead, and no connection to it could be established.
do not mail	spamcops	Spamcop traps.
do not mail	spamtrap	Confirmed spam fighter trap.
do not mail	hard_bounces	Static list of verified hard bounces
do not mail	litigators	Litigators and lawyers whom sue email marketers (traps).
do not mail	complainers	Complainers, screamers and grumblers.
do not mail	bot_clickers	Automated systems that generate ÒclickÓ events on links in your emails without a human intentionally clicking.
do not mail	email_bot	Any automated agent interacting with email (opens, clicks, replies, filtering, scanning).
do not mail	invalid_syntax	There is a syntax error in the email address.
do not mail	invalid_mx	Mail exchange is not setup correctly.

Color Code	Status	Description
do not mail	smtp_protocol	The destination server allowed us to connect but the SMTP session was closed before the email was verified.
do not mail	lashback	Lashback compliance traps.
do not mail	invalid_vendor_response	The response from the email verification service provider (the ÒvendorÓ) is unexpected, malformed, or does not conform to the standard expected by the user or system requesting the verification.
do not mail	smtp_error	The SMTP answer from the server is invalid or the destination server reported an internal error to us.
do not mail	email_disabled	The email account is suspended, disabled, or limited and cannot receive emails.
do not mail	proof	Proofpoint spamtrap.
do not mail	antispam_system	SMTP server flags or temporarily blocks verification as abusive (often after prior successful checks), typically due to high request volume in a short time triggering rate limits.
do not mail	blacklisted	Address/domain/IP is associated with blacklists/denylists .
do not mail	advisory_trap	Spam traps removed from matching spam fighter Ips.
